5.3 μ f $^{239}\text{Pu}(\text{IV})$ citrate

Age at injection 45

Date of death

Age at death

Time after injection 27 yr

Death certificate no.

Hp-6

This patient, a forty-five year old white male with a history of Addison's disease since January 1945, was admitted to the hospital on December 14, 1945, for treatment of numerous infected lesions of the eyelids and toes. He responded to conservative treatment and studies began during convalescence. On readmission in June 1947, his condition was essentially unchanged.
